

## Sample Playground Designs

(Including Toddler Play Areas)

#### The Possibilities Are Endless!

Send us your Floor Plan and let us provide you with a <u>FREE</u> 3-D custom design tailored to your particular space & budget!

We look forward to hearing from you!

PRICING: Page 1 of 2

#### **General Pricing Parameters**

\*\* When K Play quotes a project, it is for the project COMPLETE or "Turn Key" including, but not limited to:

(A) Design/Engineering (B) Materials & Production (C) Shipping (D) Installation (E) Any State Certifications Required, other.

#### **IMPORTANT:**

- 1. ALL of our quality, compliant component suppliers are from UK/Central Europe, USA & Canada and NOT CHINA. Playground equipment from China is way more often than not produced with non-compliant, inferior and unsafe materials. Additionally, we have found designs from China to typically be NON-compliant with US / ASTM standards (slides emptying into a ball pit...one very common example). Not only do you as the owner/operator of an indoor play center run the risk of significant liability with this "cheap" product, but also of not being able to open your center once you've paid for and installed your non-compliant play equipment (cited by the local building authorities and/or fire marshal).
- 2. **K Play itself and not subcontractors installs the playground equipment**. The quality of the installation for safety, durability, security and warranty is vital. We pride ourselves not only on the quality of our materials, but also with our expertise and care that we take with our installations.
- 3. **Beware of Deceptive advertised Pricing which you will encounter on the Internet** again, typically from US Importers from China as well as Chinese exporters to the USA that fail to include costs of shipping + installation or any other costs like state certifications which you may need (Pennsylvania for sure).
- 4. Final pricing is ultimately dependent upon a number of factors including, but not limited to:
- Project Location (where we are shipping to and mobilizing our specialized K PLAY crew to install the play equipment).
- Materials Costs these fluctuate by nature, so a quotation would only be valid for let's say 14 days, 30 days max.

While we therefore don't publish a "price list", we do provide general pricing parameters below.

- Stand-alone Projects generally start at a minimum of \$65K COMPLETE / "Turn Key".
- The minimum COMPLETE project price of any of the projects shown in these Sample Designs starts at roughly \$75K.
- We can do smaller projects on a case by case basis only when you are flexible on timing and we can defray some of the shipping & installation costs while working on other projects in your area.
- **2 LEVEL STRUCTURES** Generally in the **\$70K-150K range**. Depends on the actual footprint as well as configuration of play events. Slides, FYI, are the most expensive components to both produce and install.
- 3 LEVEL STRUCTURES Depending on the footprint (Lx W) generally wind up Total Cost Complete: generally \$75K \$190K range.
- 4 LEVEL STRUCTURES Depending on footprint (LxW) much wider range generally \$150K to double that, or more.
- **TODDLER ZONES** As part of a project with main play structure: adds **\$5K-\$15K** generally (just all depends on square footage and number of play elements).

#### **IMPORTANT!**

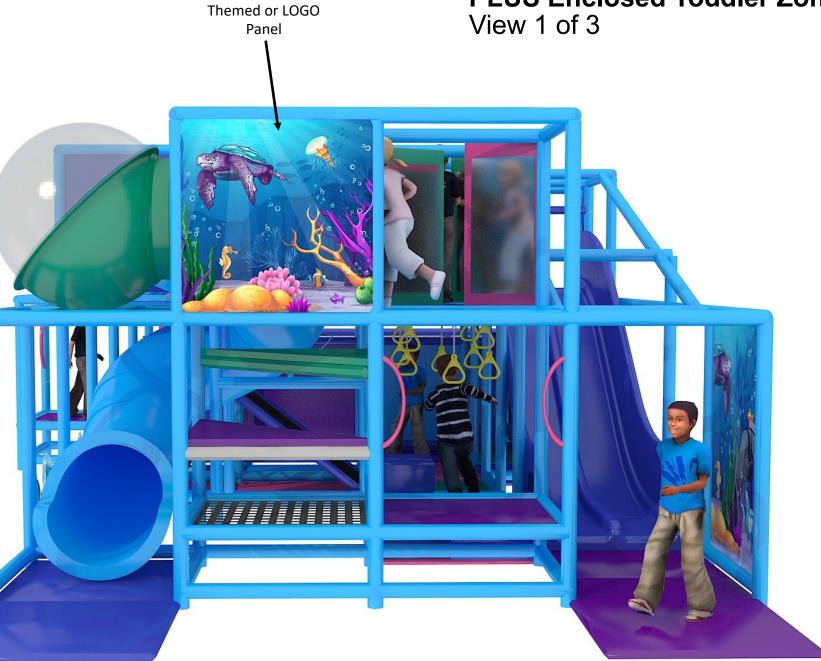

Please note that Anti-climb and Safety perimeter netting - as shown in this view - is not shown on the remaining pages of this pdf in order to provide better visibility of the interior elements.
